DXC packaging bags can hold up to 25 kg pet food while meeting multiple customization needs.

Features

- Excellent barrier materials: NY, aluminum foil
- Convenience: zipper, side gusset handle
- Skid resistance: anti-skid coating, micro-perforations

Structure

Technical

Printing

DXC offers 3 printing technologies, including HP Indigo 25000 Digital Press, 10-colors rotogravure and 6-colors flexo press, all support additional varnishing and special spot colors.

Lamination

We have two different types of laminating equipment, including a 1.6 meter wide solvent-based and Nordmeccanica solvent-free laminator, both of which support lamination of multi-layers.

Slitting

After the lamination process, the Polyester is then loaded onto a slitting machine. This machine works to ensure that all the excess material is removed from the roll. This ensures that the roll is left smooth and without any rough edges.

Pouch Forming Machinery

DXC's 26 sets of bag-making machines offer a multitude of pouches and high-quality laminates. Depending on the customer's application, they can be enhanced with various convenience features, product declaration elements, or refined printing finishes.
